
STAWELL GOLD MINE CYANIDE & CO₂ CRIMINAL

PROTEST!

11.30 - 1.30 pm Wednesday 19 March 2008
outside the gates of Stawell Gold Mine, Reef Road, Stawell

The Stawell Gold Mine is poisoning our air and water and the sooner it is shut down, the better for the people of Stawell and the future generations coming after. The new owners, Northgate Minerals, are foreign owned corporate jackals known for their water poisoning crimes in Canada, now come to Stawell to pick the bones of this dying mine, working lower grade ores, burning up diesel and poisoning Wimmera water on huge scale. Typically a

modern gold mine extracts 1 kg of gold at the cost of 240 kg of cyanide, 250,000 litres of water, 3,100 tonnes of solid waste and 25 tonnes of CO₂. In a time of drought and climate change this is obscene. The management and shareholders of Northgate are criminals and their crimes are against the Earth and future generations. Come to the gates and have your say. Northgate won't stop their toxic trade until they are told to.
